

Cradle to Cradlesm Certified Silver

Dow Building Solutions Styrofoam® XPS Insulation

Expires 12-04-2010

STYROFOAM(tm) Brand Extruded Polystyrene Foam Insulation has been recognized as a high performance building insulation for over 60 years in-service. One example in garden rooftop designs where Dow scientists pioneered a new kind of assembly in 1968 featuring STYROFOAM(TM) XPS, Dow's flagship brand, which has a higher compressive strength and moisture resistance to enable this sustainable design. Proprietary manufacturing processes produce boards with uniform, closed-cell structures and high long-term stable R-values. STYROFOAM(TM) brand XPS insulation products offer the highest moisture resistance of any foam plastic insulation available in the industry today for demanding applications such as garden roofs, below grade foundation, geotechnical, rain screen cavity wall applications and more. The reusable boards feature high compressive strength but are also lightweight and easy to cut and install.
